

Gas Cylinder Test Date Rings Health and Safety Law

By law, all dispense gas cylinders have to be regularly inspected and tested to ensure they continue to be totally safe for the high pressures contained inside them.

Every cylinder should have a coloured ring attached to the valve indicating when it is due for removal and testing by the gas provider. This is routinely changed every 10 years.

The table in this document indicates when the cylinder should be tested by law:

					
2007	2008	2009	2010	2011	2012
					
2013	2014	2015	2016	2017	2018
					
2019	2020	2021	2022	2023	2024

Bar and Cellar Safety
